

Detect Hepatitis A Before It Spreads

Anti Hepatitis A Virus (Anti-HAV) IgM

@ ₹1,133/-

Significance

The test detects IgM antibodies in the blood, indicating a recent or active infection with the Hepatitis A virus. Hepatitis A is a liver infection typically transmitted through contaminated food or water. The presence of IgM antibodies signifies an acute infection and helps diagnose the condition during its early stages. This test is essential for timely detection, enabling appropriate medical intervention to manage symptoms and prevent the spread of the virus. It is a critical tool in safeguarding liver health and promoting recovery from Hepatitis A.
