

Suspect Hepatitis E?

Confirm It Early With IgM Antibody Testing

Significance

The Anti Hepatitis E Virus (Anti-HEV) - IgM test is used to diagnose a recent Hepatitis E infection. When your body is exposed to the Hepatitis E virus, it produces IgM antibodies as an early immune response. This test detects those antibodies in your blood, making it one of the earliest and most reliable ways to confirm a Hepatitis E infection.

Anti Hepatitis E Virus (Anti HEV) - IgM
