

Good Health Begins with Balanced Electrolytes

Significance

The Serum Electrolytes Test measures the levels of three key electrolytes—Sodium (Na^+), Potassium (K^+) and Chloride (Cl^-). This test helps detect imbalances caused by dehydration, kidney disorders, heart problems, or the side effects of medications, making it essential for monitoring overall health and electrolyte balance.

Serum Electrolytes (3 Parameters)

@ ₹ 520/-

- Chloride
- Potassium
- Sodium

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation***

CAP
From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

98% Reports released **Within 06 hours** after samples reach the lab

*As on 5th December 2024 | *As per a survey on doctors' perception of laboratory diagnostics (IJARIIT, 2023)
