

Single Test Important for Vision, Immunity and Skin

Vitamin A

@ ₹ 2299/-

Significance

The Vitamin A test measures the level of retinol in the blood to assess Vitamin A levels. Deficiency can lead to vision issues, immune impairment, and skin problems, while excess levels may cause toxicity, impact liver function and bone health. This test is recommended for individuals with symptoms of deficiency or toxicity, those with malabsorption issues or people on restrictive diets. One can also opt for this as a preventive health check to understand body functions before any health issues occur.

First National Diagnostic Chain
to have **100%** of its Labs with
