*9 out of 10 Doctors Trust that Thyrocare Reports are **Accurate & Reliable***

NAME : XXXXXXXXXXXXXXXX
REF. BY : XXXXXXXXXXXXXXXX
TEST ASKED : HAVT

SAMPLE COLLECTED AT :
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

TEST NAME	TECHNOLOGY	VALUE	UNITS
ANTI HEPATITIS A VIRUS (HAV) - TOTAL	**E.L.I.S.A**	**4.83**	**OD Ratio**

Bio. Ref. Interval. :-

Negative : < 0.90
Equivocal: 0.90 - 1.10
Positive : > 1.10

* Equivocal result should be retested after 2 weeks.

Clinical significance:

The onset of hepatitis a is always accompanied by detectable and usually high levels of Anti-HAV. A negative result for a patient therefore excludes hepatitis a as a cause of illness. After an infection, Anti-HAV remains detectable for a lifetime, so that detection of Anti-HAV is indicative of current immunity, an essential criterion in deciding whether to supply active immunization by vaccination or to administer immunoglobulins for post-exposure prophylaxis in at-risk contacts.

External quality control program participation:

College of American Pathologists (CAP): CAP viral marker series - I survey.
CAP certification number: 7193855-01

Kit validation references :

CDC. Summary of notifiable, United States, 1997. MMWR 1998;46:1-87

Please correlate with clinical conditions.
Method:- Competitive Enzyme Immunoassay

CONDITIONS OF REPORTING

- The reported results are for information and interpretation of the referring doctor only.
- It is presumed that the tests performed on the specimen belong to the patient; named or identified.
- Results of tests may vary from laboratory to laboratory and also in some parameters from time to time for the same patient.
- Should the results indicate an unexpected abnormality, the same should be reconfirmed.
- Only such medical professionals who understand reporting units, reference ranges and limitations of technologies should interpret results.
- This report is not valid for medico-legal purpose.
- Neither Thyrocare, nor its employees/representatives assume any liability, responsibility for any loss or damage that may be incurred by any person as a result of presuming the meaning or contents of the report.

EXPLANATIONS

- Majority of the specimen processed in the laboratory are collected by Pathologists and Hospitals we call them as "Clients".
- **Name** - The name is as declared by the client and recored by the personnel who collected the specimen.
- **Ref.Dr** - The name of the doctor who has recommended testing as declared by the client.
- **Labcode** - This is the accession number in our laboratory and it helps us in archiving and retrieving the data.
- **Barcode** - This is the specimen identity number and it states that the results are for the specimen bearing the barcode (irrespective of the name).
- **SCP** - Specimen Collection Point - This is the location where the blood or specimen was collected as declared by the client.
- **SCT** - Specimen Collection Time - The time when specimen was collected as declared by the client.
- **SRT** - Specimen Receiving Time - This time when the specimen reached our laboratory.
- **RRT** - Report Releasing Time - The time when our pathologist has released the values for Reporting.
- **Reference Range** - Means the range of values in which 95% of the normal population would fall.

SUGGESTIONS

- Values out of reference range requires reconfirmation before starting any medical treatment.
- Retesting is needed if you suspect any quality shortcomings.
- Testing or retesting should be done in accredited laboratories.
- For suggestions, complaints or feedback, write to us at **info@thyrocare.com** or call us on **022-3090 0000 / 67 30 00**
- SMS: <Labcode No.> to **9[illegible]666333**
