PATIENTID : XXXXXXXXXXXXXXXX

TEST NAME	TECHNOLOGY	VALUE
VDRL (RPR) FOR SYPHILIS	FLOCCULATION	NON REACTIVE

Clinical Significance :-

Syphilis is a sexually transmitted disease caused by a spirochete Treponema pallidum. It can cause long-term complications by invading the nervous and cardiovascular system, if not adequately treated. It may also be transmitted from mother to baby during pregnancy or at birth, resulting in congenital syphilis.

Interpretation:

RPR test is an effective screening test for syphilis. The test antigen is a modified form of VDRL antigen containing microparticulate carbon, which aids the macroscopic reading of results. RPR test may give false positive results in patients suffering from HIV, tuberculosis, leprosy, infectious mononucleosis and any autoimmune disease. Weak reactive and Reactive results must be confirmed using Treponema pallidum Hemagglutination Assay(TPHA) and fluorescent treponemal antibody absorption (FTA-ABS).
