NAME : XXXXXXXXXXXXXXXXXX
REF. BY : XXXXXXXXXXXXXXXXXX
TEST ASKED : WIDAL

SAMPLE COLLECTED AT :
XXXXXXXXXXXXXXXXXXXXXXXXXXXX

TEST NAME	TECHNOLOGY	RESULT
WIDAL TEST	Titration	
SALMONELLA TYPHI - O		NO AGGLUTINATION
SALMONELLA TYPHI – H		NO AGGLUTINATION
SALMONELLA PARATYPHI – A (H)		NO AGGLUTINATION
SALMONELLA PARATYPHI – B (H)		NO AGGLUTINATION

Method : Rapid Agglutination

Interpretaton: The antibody titre of the test sample is its highest dilution that gives a visible agglutination. 80 µl corresponds to 1 in 20 dilution, 40 µl to 1 in 40, 20 µl to 1 in 80, 10 µl to 1 in 160 and
5 µl corresponds to 1 in 320 titre. Agglutinin titre greater than 1:80 is considered as significant infection and low titres indicate absence of infection.

CLINICAL SIGNIFICANCE: The organism Salmonella Typhosa is responsible for causing enteric fever or typhoid fever,Which is characterized generally by very high consistent fever, loss of appetite, transitory bacteraemia, Round or oval shaped ulcers on smooth peritoneal surface of Peyer's patches solitary lymphoid follicle of ileum etc. Widal slide test used for detection of specific antibodies produced in response to stimulation by specific antigen of Salmonella group.

KIT VALIDATION REFFERENCE : Felix A. (1942) Brit. Med. Jr. 11,597.
